

CAFEBABE

Introduction

Laffineur G r me

18 Octobre 2016

Universit  de Namur

Architecture générale

Diagramme de classes

Workflow

Le module de test

Les instructions

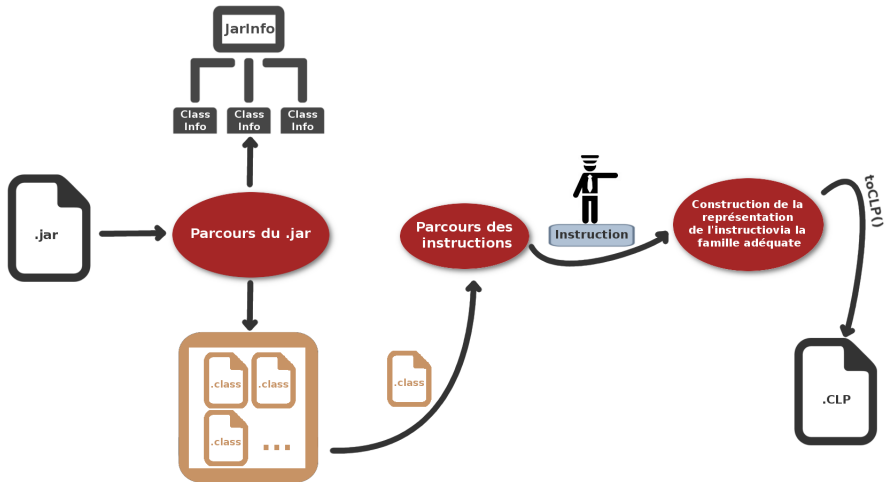

Démonstration

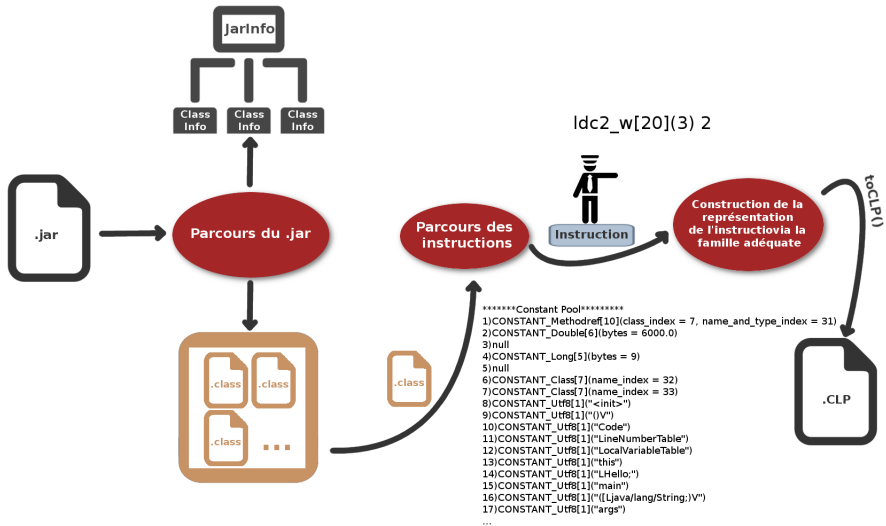

Architecture générale

Diagramme de classes

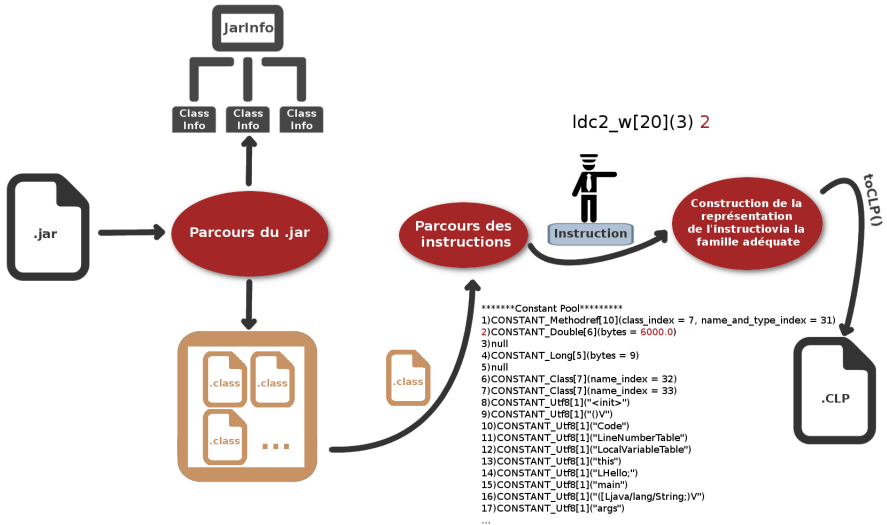

Workflow

Workflow

Construction d'un arbre (Structure JarInfo)

Permet de représenter et calculer à l'avance les informations qui seront utiles pour la traduction. Permet une traduction séquentielle des instructions à la volée.

Ex : Nombre de registre pour les appels de méthode.

Module de traduction indépendant

Analyse, extraction et représentation interne des informations source découplée du processus traduction (toCLP). Facilite l'ajout et/ou le changement de représentation cible.

Ex : Changement de représentation pour dynamiser la stack.

Vérification des inputs

Consistance des inputs.

Détection d'instructions inexistantes, méthodes ou classes absentes, fichier corrompu ,erreurs syntaxiques, etc..

Quid des classes non comprises dans le .jar ?

Junit

Utilisation d'un framework de test automatique. Module inclus dans le projet qui permet d'effectuer les tests de manière automatique et répétable.

Le module de test

The screenshot shows an IDE with the following components:

- Project Explorer:** Shows the project structure with folders for `src`, `out`, `com.cafebabe`, `core`, `test`, and `TestResources`. The `test` folder is expanded, showing `TEST_1` through `TEST_10`.
- Code Editor:** Displays the source code of `CafeBabeTest.java`. The code defines a `public class CafeBabeTest` with two test methods: `test_1()` and `test_2()`. Both methods use `Assert.assertEquals` to verify the output of `CafeBabe.main` against expected values.
- Run Console:** Shows the execution results of the tests. It indicates that all 11 tests passed in 3s 165ms. The console output includes debug messages from the JVM, such as `TopStack = 6`, `DEBUG c.c.c.i.I.translateList - 23: dstore[57](2) 4`, and `TopStack = 5`. It also shows the final output of the program: `INFO com.cafebabe.core.CafeBabe.hornify - Translation of main([Ljava/lang/String;)V :OK` and `Process finished with exit code 0`.

```
public class CafeBabeTest {  
    private String TR = "/home/laaffineur/Dropbox/IdeaProjects/CAFEABE/src/com/cafababe/test/TestResources/";  
    private String TR2 = "/out/artifacts/TEST_jar/";  
    @Test  
    public void test_1() throws IOException {  
        String testName = "TEST_1";  
        final File expected = new File(TR+testName+TR2+"TEST.clp");  
        final String outputFolder = TR+testName+TR2;  
        String args[] = new String[2];  
        args[0] = TR+testName+TR2+"TEST.jar";  
        args[1] = outputFolder;  
        CafeBabe.main(args);  
        final File result = new File(outputFolder+"TEST.clp");  
        Assert.assertEquals(FileUtils.readLines(expected), FileUtils.readLines(result));  
    }  
    @Test  
    public void test_2() throws IOException {  
        String testName = "TEST_2";  
    }  
}
```

Les instructions

Pour tous les types primitifs (int,long,double,short,..) :

Chargement de constantes

Opérations arithmétiques

Structures conditionnelles

Gestion des boucles

Instructions liées à la gestion des variables

ADD dadd, fadd, iadd, ladd

SWAP swap

SUB dsub, fsub, isub, lsub

DIV ddiv, fdiv, idiv, ldiv

DUP dup, dup_x1, dup_x2

DUP2 dup2, dup2_x1, dup2_x2

GOTO goto

INC iinc

MUL dmul,fmul,imul,lmul

NEG dneg,fneg,ineg,lneg

NOTHING nop,pop,pop2

MODULO drem,frem,irem,lrem

CONVERT d2f,d2i,d2l,f2d,f2i,f2l,i2b,i2d,i2f,i2l,i2s,l2d,l2f,l2i

COMPARE dcmpg,dcmpl,fcmpg,fcmpl, lcmpl ,lcmpg

IFCMP if_acmpeq,if_acmpne,if_icmpeq,if_icmpne,ifeq,ifge,ifgt,
iflt, ifle,ifne,ifnonnull,ifnull

Instructions implémentées

CONST lconst_0,lconst_1,iconst_0,iconst_1,iconst_2,iconst_3,
iconst_4,iconst_5,dconst_0,dconst_1,fconst_0,

Les opérateurs bitwise

La gestion des tableaux

Les appels de méthodes

La gestion des objets

Optimisations liées à l'absence de registres en bytecode

Démonstration

```
public static void main(String args[]){  
    long a = 1;  
    double b = 6000;  
    int c = 2;  
    short i = 0;  
  
    while(i < c){  
        if (b == 6000) {b = b/c;} else{a=a+9;}  
        i++;  
    }  
    c = -c;  
} //RESULT :: a=10 b=3000.0 c=-2 i=2
```

Analyse de l'output [Les prédicats read et write]

Read

```
read_1(SP,IV0,IV1,IV2,IV3,IV4,IV5,IV6,IV7,IV8,IV0) :- {SP = 0}.  
read_1(SP,IV0,IV1,IV2,IV3,IV4,IV5,IV6,IV7,IV8,IV1) :- {SP = 1}.  
..
```

Write

```
write_1(SP,IV0,IV1,IV2,IV3,IV4,IV5,IV6,IV7,IV8,W0,W1,W2,W3,W4,W5,W6,W7,W8,VAL) :-
